TITLE INDEX TO VOLUME 1

Alternations and the Computational Complexity of Logic Programs, 19
Associate Concurrent Evaluation of Logic Programs, 285

Bibliography on PROLOG and Logic Programming, 81

Equality, Types, Modules, and (Why Not?) Generics for Logic Programming, 179
Extension of Lambda-Calculus for Functional Programming, 241

Heterogeneous SLD Resolution, 297

Linear-Time Algorithms for Testing the Satisfiability of Propositional Horn Formulae, 267
Logical Levels of Problem Solving, 151
Logical Reconstruction of PROLOG II, 143

Making PROLOG More Expressive, 225

Negation as Failure: A Comparison of Clark's Completed Data Base and Reiter's Closed World Assumption, 51
N-PROLOG: An Extension of PROLOG with Hypothetical Implications, 319

Oriented Equational Clauses as a Programming Language, 165

Parser Generation and Grammar Manipulation Using PROLOG's Infinite Trees, 253

Sequential Nature of Unification, On the, 35
Synthesis of a Unification Algorithm in a Logic Programming Calculus, 3

Theory of Complete Logic Programs with Equality, 211
Transformations of Logic Programs, 305
